

SECRET/NOFORN - SKEET CHANNELS ONLY

PROJECT SUN STREAK (U)

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

Session Procedures Report (S/NF/SK)

PROJECT NUMBER: 8715	SESSION NUMBER: 3
DATE OF SESSION: 1 OCT 87	TARGET COUNTRY:
REFERENCE:	MISSION STATUS:
TECHNIQUE UTILIZED: CRV	SOURCE IDENTIFIER: 018

1. (S/NF/SK) Monitor Tasking: The monitor was provided with suggested additional guidelines (attached), based upon the Source's earlier session work.

2. (S/NF/SK) Source Tasking: The Source was initially directed to begin the session in Stage IV by placing the originally-provided coordinates outside the matrix. But the Source informed the monitor that these coordinates seemed to produce information which the Source perceived to be associated with only a superficial description of the site. The monitor then attempted to exploit this (erroneous) idea by instructing the Source to cross out the coordinates and replace them with the mission number (8715), the intention being to get the Source's mind focused upon the intelligence question (i.e., the "target") vs. the site. This trick ultimately failed. Also, just prior to the start of the session, the Source engaged the monitor in a conversation the details of which centered around the Source's earlier difficulty experienced with this site. This conversation led to other topics, mostly of an administrative nature. These kinds of conversations prior to a session, however necessary, are nevertheless disruptive, i.e., do not set the stage for a smooth session. The session in fact did not go smoothly, and was restarted after a break--the Source could not seem to break away from the narrow, single site element of the "pile".

3. (S/NF/SK) Summary: Attached; pretty much the same as earlier ones. The Source again mentions that a body of water lies in the vicinity of the site.

The Source gained control here; he must be instructed to move and respond to tasking. Monitor & ops will

4. (S/NF/SK) Comments: At the bottom of the monitor's bag of tricks lies the tool of directing the Source around the site, rather than allowing the Source to "roam" at leisure, looking for "the answer"--it may be that there is a subconscious or unconscious aversion/repulsion to a key element of the target. (For example, this particular Source has been known to avoid, i.e., not recognize and objectify, percepts which are connected with the idea of "death").

SECRET/NOFORN

MEMO FOR: GL

SUBJECT: PROJ 8715

-----Viewer 018 is insistent on perceiving the "pile of powder" he discovered in his initial session. Suggest 018 be allowed to "follow" his pile of white and grey powder and determine:

- a. The nature of the powder
- b. How is it used
- c. How is it combined with other powders, solids, fluids
- d. What is the impact of the resultant substance, if any
- e. What physical changes take place when the powder is combined with other substances
- f. Follow the end product to its destination
- g. Determine where the powder originated from
- h. How did it get to the site
- i. What are the military implications of the end result
- j. Describe its use

memorandum

DATE: 2 October, 1987

REPLY TO
ATTN OF: DT-SSUBJECT: SESSION SUMMARY, PROJECT 8715 (C/SS)
SG1J

TO: DT-S (ATTN: [REDACTED])

1. (S-SS) Statistics:	Project #:	8715
	Viewer:	018
	Session date:	1 OCT 87
	Filename:	8715.L03

2. (S-SS) The perceptions gained from this session were, by and large, a repeat of previous sessions. New items include:

a. There were perceptions of two men located in the structure, near the pile of powdery dry substance. Both men were wearing black business suits. One was carrying a black leather (AOL: pouch). The other man was somehow associated with a sharp metallic item (NFI).

b. Once again trying to identify the location, an attempt was made to identify the powdery substance in the large pile. From all indications (see page 10), the substance is some kind of building material; supposedly cement or limestone. There were repeated impressions of this material being destined for final use in the construction of a bridge.

c. In a final attempt to identify the overall location, the impressions reaffirm a previous session's concept that the overall area is a land/water interface, supposedly with a port (see sketch, page 11).

3. (S/SS) Viewer's critique: I have the feeling that there is something about this site which is not being decoded correctly, and that I will probably continue to have trouble identifying site specifics until I can work through the problem. At this point the problem, itself, has not been identified, so I can only continue to work and wait. I feel that I am at the site, but that the perceptions gained are neither important, nor revelent to the information desired.
